Applicant's election with traverse of the Group I invention, directed to claims 1-22 and 26, in the reply filed on 13 February 2006 is acknowledged. The traversal is on the ground(s) 1) that the restriction under subcombinations usable together was incorrect and 2) that there would be serious burden upon examiner to examine the inventions together. This is not found persuasive because with respect to item 1, the inventions as claimed, though directed to confocal probes are independent inventions in that the manner in which probes are used as well as the constructive elements that make up the probes is different. With respect to item 2, for examiner to thoroughly examine both groups of inventions, areas not necessary for examination of the Group I invention would have to be searched.

The requirement is still deemed proper and is therefore made FINAL.

QUAYLE ACTION

This application is in condition for allowance except for the following formal matters:

This application is in condition for allowance except for the presence of claims 23-25 directed to an invention non-elected with traverse in the reply filed on 13 February 2006.

Applicant is given TWO MONTH from the date of this letter to cancel the noted claims or take other appropriate action. Failure to take action during this period will be treated as authorization to cancel the noted claims by Examiner's Amendment and pass the case to issue. Extensions of time under 37 CFR 1.136(a) will not be permitted since this application will be passed to issue.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: The prior art fails to disclose, either singly or in combination, a confocal probe having a body accommodating an optical system comprising an optical element having a light incident surface, a first surface and a light emerging surface which statically define an optical path of the light beam; and a deflecting device mounted on the first surface of the optical element, wherein the optical fiber, the converging lens and the optical element are secured on an inner wall of the body at predetermined positions, and wherein the light beam emerged from the converging lens enters the optical element through the light incident surface, the light beam passed through the light incident surface entering the deflecting device through the first surface, the deflecting device dynamically deflecting the light beam incident thereon, the light beam deflected by the deflecting device being directed to the light emerging surface and emerging therethrough, as the scanning beam, toward the target.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
